

Grass-Fed Grain-Finished BEEF

WHY IS GRAIN-FINISHED BEEF BETTER?

The difference between finishing cattle on grain instead of grass is ultimately **TASTE**. At Tony's we prefer the **ENHANCED MARBLING** and **FLAVOR** from grass-fed, grain-finished beef.

THE GRAIN-FINISHED DIET:

- 45% CARBOHYDRATE
(corn, milo, wheat)
- 30% PROTEIN
(distillers grains, corn gluten feed)
- 22% SILAGE/ROUGHAGE
(corn silage, alfalfa, grass, hay)
- 3% VITAMINS/MINERALS

Grain Finishing

ENHANCES
MARBLING

A RUMINANT *is an animal with a 4-compartment stomach, allowing it to digest grasses as well as grains.*

IS GRASS-FINISHED BETTER?

It takes three times longer to finish cattle on grass than on grain, adding to the cost of grass-finished beef, and the strain on the environment.
